This report is the first release of WAID fatality information for 2012 and it has been compiled by members of the National Water Safety Forum. Grateful acknowledgment is extended to those organisations that have contributed data. Some of these are listed. Thanks are also extended to the contributing police, fire and rescue services.

The report was produced from WAID data as of July 2013.

**Purpose**
WAID provides a comprehensive and reliable incident database for members of the public participating in water-related activities. This will inform decisions on risk acceptability, prevention and the appropriateness of risk controls and regulation.

**Application**
Activities span sports (under, on and above water), leisure boating (all forms), and waterside pastimes. Locations include domestic premises, private and public waters throughout the UK and the UK search and rescue areas.

**How WAID Works**
WAID is web-based and collects incident data from a wide range of sources including the emergency services, sports governing bodies, coastguard, rescue services, coroners courts, media reports etc. Collected data is merged into a single incident record for each incident to produce a comprehensive account from basic date/location/casualty information, root causes and emergency responses, to investigation outcomes. Incident records are continually updated as further information becomes available, for example from investigation reports or new data sources.

The Incident Record data can be interrogated extensively and a wide variety of reports produced of which this report shows a small sample. Future reports will include data on non-fatal outcomes together with available data on the extent of activity participation. This will enable the production of activity risk information which can be used as a measure of risk acceptability.

**Data**
Data used in the preparation of this first release of 2012 data for fatal incidents has been obtained from a number of sources. The National Water Safety Forum (NWSF) is progressively extending the number of contributors, improving the quality of data already provided and incorporating new information as it becomes available from sources such as coroners’ reports. We would welcome approaches from organisations who wish to contribute relevant data: www.nationalwatersafety.org.uk/ContactUs

Spreadsheet copies of the tables in this and previous reports can be found here.

**Changes over the period**
The core data providers took steps to further improve verification and completeness of records during 2012, resulting in a better record set. The main impact of this work on these data can be noted in the ‘crime suspected’ and ‘suicide suspected’ records, along with a reduction in lower quality and missing data fields.

**Providing Further Analyses**
The wide range of data held in WAID enables the WAID administration team to provide custom analyses to meet specific needs.

For further information on this service please see: www.nationalwatersafety.org.uk/waid

**Future Reports**
This report has been produced from data held in WAID as of July 2013. As more data sources and further information such as investigation report outcomes become available this will be incorporated in the WAID data.
WAID uses five headings to classify the nature of each fatality, shown in the table on the right, together with their total.

The sum of accidental and natural causes, 371, is used in the remainder of this report. The table below shows primarily the detailed location type and activity contribution of these 371, with the distributions of suicides summarized in the bottom row and right hand column.

- **Lake/Loch/Lough**
- **Pond**
- **Quarry**
- **Reservoir**
- **River**
- **Stream/Ditch/Burn**
INCIDENTS INVOLVING 80-94 YEAR OLDS

### 80-84 YEAR OLD
- **Gender**
  - Male: 8
  - Female: 1

- **Activity**
  - Person/object in water, person of uncertain status: 1
  - Sailing: 2
  - Angling: 1

- **Location**
  - Canal/Aquaduct: 1
  - Coast/Shore/Beach: 1
  - River: 1

- **Excluded**: 1

### 85-89 YEAR OLD
- **Gender**
  - Male: 2
  - Female: 1

- **Activity**
  - Person/object in water, person of uncertain status: 1
  - Swimming: 2
  - Walking/running: 1

- **Location**
  - Lake/Loch/Lough: 2
  - River: 1

- **Excluded**: 1

### 90-94 YEAR OLD
- **Gender**
  - Male: 2
  - Female: 1

- **Activity**
  - Person/object in water, person of uncertain status: 1
  - Walking/running: 2

- **Location**
  - Dry Ground: 2
  - Lake/Loch/Lough: 2

- **Excluded**: 1
Two cases have been excluded from the above analysis.
Formed in 2005, the NWSF is an association of organisations tasked with providing a “one-stop-shop” for authoritative water safety information and advice. Members have a wide variety of interests and responsibilities for water safety.

The forum’s work is carried out by six expert groups, overseen by a co-ordinating group.

Central to the forum’s work and decision making are its Principles for Water Safety, which include: fully recognising the responsibility of individuals; encouraging the participation of all stakeholders in decision making; and, minimising the need for statutory regulation.

The forum’s brief, to provide information and advice, is delivered through its communications strategy. Further information on the strategy, the Principles for Water Safety, and details of the forum’s other work can be found on the website:

www.nationalwatersafety.org.uk
